

## TAKE HOME LEAFLET

### NORDIC REGISTRIES IN SAFETY STUDIES AND OUTCOME RESEARCH

Thanks for participating in the workshop about Nordic studies based on Nordic pooled data. We (ApHER) believe that using Nordic data and especially pooled data, gives unique opportunities.

#### Key messages from the workshop

- Rare events (e.g. male breast cancer) can be analysed using Nordic data
- The unique PIN enables linking of data from several data sources
- Prerequisites for conducting a similar study:
  - Firm knowledge of the legal framework
  - Understanding of the background for the registers and their structure

#### Interested in knowing more?

Do not hesitate to contact us if you would like to discuss more about our methods and which possibilities Nordic data gives. Besides what we have presented today, Nordic data yields unique opportunities in regards to epidemiology, budget impact models and cost-effectiveness
